

Hello,  
Satellite radio has changed my commuting experience. Since I purchased an XM radio, I find that I am unable to listen to local radio stations. The quality of programming offered by XM is way beyond that of local radio. I gladly pay my \$10/month.

I was pleased to hear that XM was going to offer traffic and weather services. I find that XM has been making strides to improve their services while local radio is maintaining the status quo. Local radio is abysmal and they show little interest in improving. I can't stand listening to the same programming over and over.

Please protect the free market place and preserve the rights of satellite radio providers.

Thank you,  
Aaron
